

GLU GONE

CARPET GLUE REMOVER

Glu Gone is a non-flammable, water based solvent and emulsifier that softens and breaks the bond of most types of adhesives, allowing easy removal. The emulsifying property allows easy water to flush off any residue.

Type:	Emulsifiable glue and mastic remover
Toxicity:	Harmful if swallowed
VOC's	Approximately 160 gm/L
Flammability:	Non- Flammable.
Color:	Green
Odor:	Non-Toxic
Composition:	Water soluble citrus solvents and non-chlorinated solvents in a biodegradable surfactant solvent
Coverage:	Approximately 150 square feet per gallon.

NOTE: COVERAGE RATES MAY VARY DEPENDING ON POROSITY, TEXTURE, APPLICATION METHOD AND PIROR SEALER APPLICATION. EXCESS BUILDUP SHOULD BE AVOIDED.

PRODUCT HIGHLIGHTS

- **Non-flammable & Non-combustible:** Unlike most other glue removers, Glu Gone is not only non-flammable but it will not support combustion even when soaked into rags or mops.
- **No hash odors:** Glu Gone has a non-toxic odor.
- **Emulsifiable:** The Glu Gone formula penetrates the mastic and softens it with emulsifying actions so that after scraping off the build of the glue, the remainder can be easily flushed with water. Heavier areas will need a second treatment.
- **Fast and Easy:** Just spray, mop or brush Glu Gone over the mastic deposits to be removed, and let it penetrate for 20 to 45 minutes depending on the thickness and type of mastic. When the layer is softened, just scrape it off and rinse the floor.

PRODUCT USES

Glu Gone can be used on all types of floor substrates that have glue deposits, and where water can be used in the final rinse. It will not interfere with the adhesion of new glue or mastics, or the use of coatings or stains.
